### Facial Shaping with Neuromodulators and Fillers

**Joseph Amado C. Galvez**

Osipal ng Maynila Medical Center | Philippines

Neurotoxin and Filler injections have been the top two procedures performed in North America in 2017 according to the American Society of Aesthetic Surgery (ASAPS).

Neuromodulation has been the gold standard in recent years in the management of a plethora of conditions ranging from Migraine, Hyperspasticity Disorders and more commonly - wrinkles. Another important aspect in aesthetic medicine is the use of Botulinum Toxin Type A (Botox) in Brow shaping, Brow lifting, Forehead lifting, Smile modification, Eye shaping and Facial contouring (Masseter injection).

I use neurotoxin injection combined with Hyaluronic Acid (Juvederm) injections

to certain regions of the face for a more dramatic result. With the advent of Low-molecular weight HA and Vycross technology, HA can now be injected not just under the skin but more importantly on the bone (structural filling) to achieve results that were once unimaginable, but now possible with the use of cohesive Filler materials.
