Fat Myringoplasty

Norberto V. Martinez

University of Sto. Tomas Hospital I Philippines

Fat Myringoplasty is indicated for small tympanic membrane perforations due to trauma, infection, post tympanotomy tube extraction or post myringoplasty residual perforations. Criteria for said procedure will be enumerated and how-I-do-it technique will be discussed. Post-operative instructions and tips to ensure success will be elaborated. Fat myringoplasty is a simple, short, cost-effective procedure with few complications. It causes less pain and trauma to the healthy eardrum and leads to maximum air bone gap improvement.
