Maxillofacial Prosthetics for the ENT Head and Neck Surgeon

Extirpation of tumors of the maxillofacial and head and neck region usually ends up with the defect being reconstructed or covered with flaps. However, not all defects require flap reconstruction. A significant number of these cases would need prosthetics either to be functional, aesthetically acceptable or merely to avoid a lengthy surgical procedure that is not beneficial to the patient. This will be an overview on using prosthetics on the different kinds of defects in the maxillofacial region.
