Epistaxis in Children: What Can We Do in the Clinic?

Lyra V. Veloro

The Medical City | Philippines

Epistaxis in the pediatric population is a common problem for otolaryngologists. Epistaxis is one of the most common reasons for referral of children to the otolaryngology clinic. Pediatric epistaxis is usually of benign origin and enjoys a range of approaches for outpatient treatment. It is however important to understand when to correctly employ the different specific interventions. We will discuss the currently available options for outpatient treatment of epistaxis in children and provide a simple algorithm for the management of pediatric epistaxis.
