Septorhinoplasty for the Crooked Nose

Cesar V. Villafuerte, Jr.

UP-Philippine General Hospital

Septorhinoplasty is the procedure which addresses both a crooked septum and nose. The procedure involves straightening of the nasal bones, the nasal dorsum and the nasal septum.

The presentation would include the surgical anatomy of the nose for septorhinoplasty, the pre-operative evaluation and analysis and a brief presentation of the principles and steps in septorhinoplasty. Cases of which will be presented.
